

Title

“What about knowledge Quality?”

Foreword

Towards a knowledge society: is knowledge a Public Good? Dynamics of knowledge Production and Distribution

Yes it is. Since yet many years, we are gone into a knowledge society and better and better, it will be characterized by this Public Good.

No one doubt results from these assertions.

Demands and doubts start, when we talk of Knowledge Production and Distribution. The question is: “what about knowledge Quality?”

Subject

We should like to remember that the man feeds on the stomach (food) and on the brain (knowledge).

About the food, until beginning of 1980, is been developed a method and they are been promulgated useful laws for the consumers, in such a way as to the food, we feed on it, yet it comes from all the world and it is certificated to standard of health and safe.

For prevention purposes examinations are carried out from Production to Distribution; they look for that the Food is devoid of bacteria or of poisons, it is not expired and badly preserved or incomplete of nutrition elements.

Unfortunately nowadays, nothing is been still done, about that arrives like nourishment for our brain.

Everyday it gets images, videos, writing texts, from the world, in different language, from different cultures, distributed by means of canals on those the consumer has not some check.

It is necessary our brain does not feed with detrimental to health Knowledge.

Conclusions

We should like to give instructions to a work team to study a method for the Quality and for the tracks of all Knowledge, that arrives to our brain without any filters, as it is been done for the Food.

So we must know like:

- 1) To single out possible responsibilities.
- 2) To prevent from going around Knowledge not certified to standard of trackability.

That is to confer value and authority to the existent Knowledge: like the Public Good deserves.
